SUMMARY

Engineer and researcher with an M.S. in Electronics & Communications Engineering and three peer-reviewed publications (IEEE, Springer) on fault-tolerant networked systems, failure modeling, and cost/availability tradeoffs. Hands-on LLM experience evaluating model-generated code and writing training feedback at Outlier, and building LLM applications with the OpenAI and Gemini APIs. Strong in Python; looking to apply rigorous, simulation-driven experimental methods to empirical AI safety research.

EDUCATION

M.S., Electronics and Communications Engineering — The American University in Cairo

Sep 2019 – May 2022

Thesis: Fault Tolerance for Access Point Failures in Smart Greenhouse Networked Control Systems

- Designed and simulated a fault-tolerant WSN-based networked control system (Riverbed Modeler) that maintains operation under single and double access-point failures.
- Modeled failure scenarios and quantified the tradeoff between redundant-infrastructure cost and the financial impact of downtime to maximize system availability.

Full-Stack Web Development Bootcamp — App Academy

Aug 2022 – Feb 2023

1,000+ hour program: data structures & algorithms, databases, and building and deploying full-stack applications.

B.S., Electronics and Communications Engineering — Misr International University

Sep 2009 – Jun 2014

PUBLICATIONS

EXPERIENCE

AI Code Trainer & Evaluator — Outlier (remote, contract)

2025 – 2026

- Evaluated and ranked LLM-generated code (Python, JavaScript) for correctness, efficiency, and instruction-following, writing detailed written rationales used as model training feedback.
- Identified bugs, hallucinated APIs, and reasoning errors in model responses and wrote corrected reference solutions.

Career Break — Parental leave and travel

2025 – 2026

AI Fellow — Headstarter AI

2024

- Built and shipped LLM-powered web apps in a fast-paced fellowship, including a customer-support chatbot with streaming, context-aware responses (Next.js, OpenAI API) and a conversational assistant on Google Gemini.

Coding Instructor — Coding with Kids

Aug 2024 – Dec 2024

- Taught programming fundamentals (Python, Scratch) to elementary students in person and online.

Graduate Teaching Assistant — Misr International University & The American University in Cairo

Feb 2016 – May 2019

- Taught labs in Electric Circuits, Digital Logic Design, and Programming (C/C++); supported exam grading.

SELECTED PROJECTS

Live-Translator — React, TypeScript, Zustand, Tailwind, Express.js, Google Gen AI, Cypress

- Full-stack chat app that translates messages between users in real time via the Google Gen AI API, with Cypress end-to-end test coverage.

DishDiva — React, Redux, Flask, SQLAlchemy, PostgreSQL, AWS S3

- Recipe-sharing platform with authentication, full CRUD, and AWS S3 image uploads; deployed on Render.

TECHNICAL SKILLS

- Languages:** Python, TypeScript, JavaScript, C/C++, SQL
- LLMs & evaluation:** OpenAI API, Google Gemini API, LLM output evaluation and rubric-based grading, prompt design, streaming responses
- Research & modeling:** Discrete-event simulation (Riverbed Modeler), fault/failure modeling, reliability and availability analysis
- Web, data & tools:** React, Next.js, Node.js, Express, Flask, SQLAlchemy, PostgreSQL, REST APIs, Git, Docker, AWS S3, Cypress
